THE NEWS...

Managed Switch Port Mapping Tool 1.99 released October 20, 2009

This is the last release before version 2.00 which is currently under development. Changes in the program:

- Switch Properties window: Added display of Switch IP Address.
- Setup: Autosizing of column widths is now optional. It can also be done on an individual column basis or all columns from the right click menu.
- Fixed error where a switch without a formal internal name was showing an error referring to the Dell brand even it if was not that brand.
- Fixed problem where duplicate mac addresses might show up in the same cell.
- Added another method of obtaining Cisco Vlans.
- Added ability to launch an SSH program from the right click menu and the main menu.
- Updated SQLite to version 3.6.19 and converted it to static linkage to avoid interference with previous versions.
- Updated MAC address/Manufacturer database.
- Tested on Windows 7 RTM.

NetScanTools® Pro 10.93.1 Installed Version Released September 1, 2009

We released a complete recompile of 10.93 to address issues brought about by changes to the Microsoft Side by Side redistributable DLLs. Since the installed version is the only version that uses them, the USB version was not updated to 10.93.1. Here are the details:

After installing KB971090 for Visual C++ 2005 SP1 on our development machines, the version of ATL/MFC/CRT referenced in the generated manifests was changed from 8.0.50727.762 to 8.0.50727.4053. This forced us to recompile all executables and dlls for the program to be sure the change is consistently propogated. This change only affects the installed version of NetScanTools Pro, it does not affect the USB version because the USB version uses static linking instead of dynamic linking of Side by Side (SxS) dlls. There are no changes to functionality in this version. **Upgrading:** If you need help upgrading to 10.93, please see the How to Upgrade section later in this newsletter.

NetScanTools® LE Status

Much work has been done on this software and it is near completion. Status: The manual tool current results web based reports are complete. The historical reports for the completely redesigned Automated Tools section are complete. The historical reports for each tool are next and should be completed shortly. Then the help file and

completion of other minor things. Release most likely in November.

NetScanTools LE is a subset of NetScanTools Pro functionality with an emphasis on the tools Law Enforcement uses. Many of the things being added into LE will be migrated back into Pro. For instance, the ability to use two or more manual tools simultaneously returns and a completely reworked and simplified Automated tool section. The user interface is also updated.

Remember, this is a subset of the tools in the Pro and it's not intended to be a replacement. There are 12 tools in LE vs at least 42 in Pro. The network management related tools are not in LE (like SNMP, Packet Generator etc) and for simplicity, LE does not depend on WinPcap. Tools in common with Pro are simplified and use only the basic modes needed to find the data you are looking for. The advanced modes found in many tools like Traceroute are not available.

NetScanTools® Pro 10.94 Coming Soon

NetScanTools Pro 10.94 is anticipated to be released in the first week of November. The changes so far include a change to better support Zone Transfers, updating to the new WinPcap 4.1.1 that specifically supports Windows 7 and updates to SQLite and the databases. There will be a few other changes that are not listed here.

NetScanTools® Pro 2 for 1 Sale is Back!

Yes, we have brought back the CDROM installed version license and USB version license for the price of the USB version. You get two licenses that you can use three places: you can install the CDROM version on your desktop and your laptop, and you can use the USB version wherever you need to. Here are the details: http://www.netscantools.com/nstpro2for1sale.html

Demonstration Videos

There are demonstration videos for both NetScanTools Pro and the Managed Switch Port Mapping Tool. These videos show real world examples of how the various tools in the program work. We recently added a **new video** explaining how to add a mib to use with the SNMP portion of NetScanTools Pro. Come and have a look: http://www.netscantools.com/videos.html

How to upgrade NetScanTools® Pro (revised image)

Here is how to upgrade NetScanTools Pro. We have added a new image below – check it out

How to upgrade:

- 1. Prerequisites:
 - You must have the NetScanTools Pro v10.x installed.
 - You must have a valid active maintenance plan.
 - The software must be registered AND you must have applied the "NST Pro 10 Registration Code" email message we sent back to you if it is not registered, our secure site will not have any login credentials ready for you.
- 2. Start NetScanTools Pro and click on the Online group in the left panel. Then click on the Check for New Version icon. Once the web page appears in the right pane, you will see the Login link text. (**NEW Alternative:** all versions after 10.54 have a Check for New Version link to the Help menu)
- 3. After clicking on the Login text, you will see a popup asking for a username and password. Those are found in the Login Access Credentials area as shown in the image on the next page. **The username and password ARE CASE SENSITIVE.** We recommend using copy and paste.

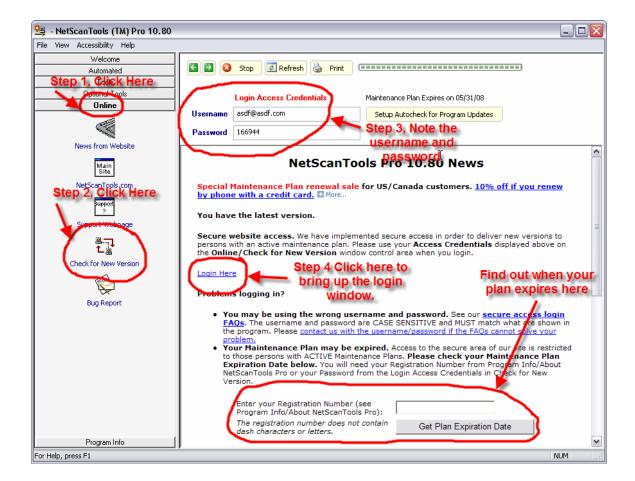

If your access credentials do not work please check for typos in your username or password (we recommend copy and paste). Your username is your email address that you gave when you registered and the password is the registration number.

It is also possible that your maintenance plan expired. Use the new online method to check your maintenance plan expiration date. Please contact us with the username and password you are using and we can check your access credentials. You must have a valid maintenance plan to download an upgrade.

Once you have logged in to the secure server, the **full download** is ready for installation by those of you with installed versions. You will need your CDKEY/serial number to run the installer – see the About NetScanTools Pro window to get it. Please install over the top of your current installation.

USB Version users can download an upgrade patch from the secure server. The latest version of the Managed Switch Port Mapping Tool is also available for download from this window and it is publically available elsewhere on our main site.

The image below shows where in the program you need to go to login to our secure site.

REMINDERS

USB Version Users – Make a Backup of Your Software!

Please make a full backup of your USB Version after you have registered it and applied the NST Pro 10 Registration Code message we sent back by email. If you have a backup of the contents of the drive, we can easily assist you in restoring it to another drive in case you lose the original drive. Remember that the Lexar Lightning drive we supply the USB version on is one of the fastest drives currently available. If you do have to restore it, we highly recommend that same drive series or a faster model. Other types of larger USB drives that cost less are often much slower.

Backup your drive by copying all files and directories to another drive either on your computer or a portable backup drive. Saving the files to CDR is even better. Please do it today!

About the Maintenance Plan - NetScanTools® Pro

You need to have an active maintenance plan to obtain the latest release. A FULL Install of the "installed version 10.93.1" (not a patch) is available on our secure site for download. Those who have the USB version are supplied with a patch for download from the secure site. You must have an active maintenance plan in order to login to the secure site. See the section **How to Upgrade NetScanTools Pro** below for help downloading the current release.

One year of maintenance (beginning at date of purchase) is included with a new or upgrade license. The primary benefit of the plan is the ability to download updates. We have released seven updates so far in 2009. We released six updates in 2008. In 2007 we released 6 updates mostly targeted towards Windows Vista compatibility.

If you let your maintenance plan expire, the cost to renew the plan increases the longer you wait. We do give a 30 day grace period after your expiration date during which the renewal cost is \$75 per license. If you are unsure when your plan expires, please feel free to contact us by email or phone or using the new method outlined earlier in this newsletter before renewing (see end of newsletter for contact information). You can always continue using the program even after the maintenance plan expires, but you will not get any changes or updated databases.
