- **2 Year Maintenance Plans Available**
- **NST Pro V12 Progress Update**

NST Pro 11.95.5 Available 5/1

This release introduces a faster, more accurate ARP engine across key discovery tools. The ARP Scanner, and Promiscuous Mode Scanner no longer rely on the operating system's ARP tables. Instead, they build and maintain an independent ARP table in real time—eliminating stale data and significantly improving both speed and accuracy.

We've also overhauled how IPs are resolved to hostnames. Resolution now runs in parallel, dramatically reducing lookup time across the suite.

Promiscuous Mode Scanner

The Promiscuous Mode Scanner benefits from both improvements: real-time ARP data and faster hostname resolution. It can identify devices operating in promiscuous mode more quickly and with better context.

In practice: Quicker confirmation of suspicious interfaces, faster hostname resolution to help identify the system behind the behavior.

ARP Scanner

The ARP Scanner now discovers live hosts based purely on real-time responses, not what the OS *thinks* is on the network. This means faster sweeps and fewer false readings caused by outdated ARP entries.

In practice: When you're scanning a subnet during troubleshooting, you'll see what's actually responding right now—not what responded 10 minutes ago. This is especially useful in dynamic environments with short DHCP leases or frequently changing devices.

Faster Hostname Resolution

Across all tools, hostname resolution now runs in parallel rather than sequentially. This significantly reduces the time it takes to map IPs to recognizable systems.

In practice: Large scans now complete much faster

2 Year Maintenance Plans Now Available

For customers who prefer fewer renewal cycles, we now offer both 1-year and 2-year maintenance plan options. This has been a frequent request over the years, and while it's not yet listed on our website, we're happy to provide this upon request. Let us know if you're interested

- 1 Year: \$100
- 2 Year: \$190

Sneak Peek NST Pro V12 Build

We're developing the next major version of NetScanTools—NST Pro v12. Below is a preview of the progress on the DNS and Country to IP tools

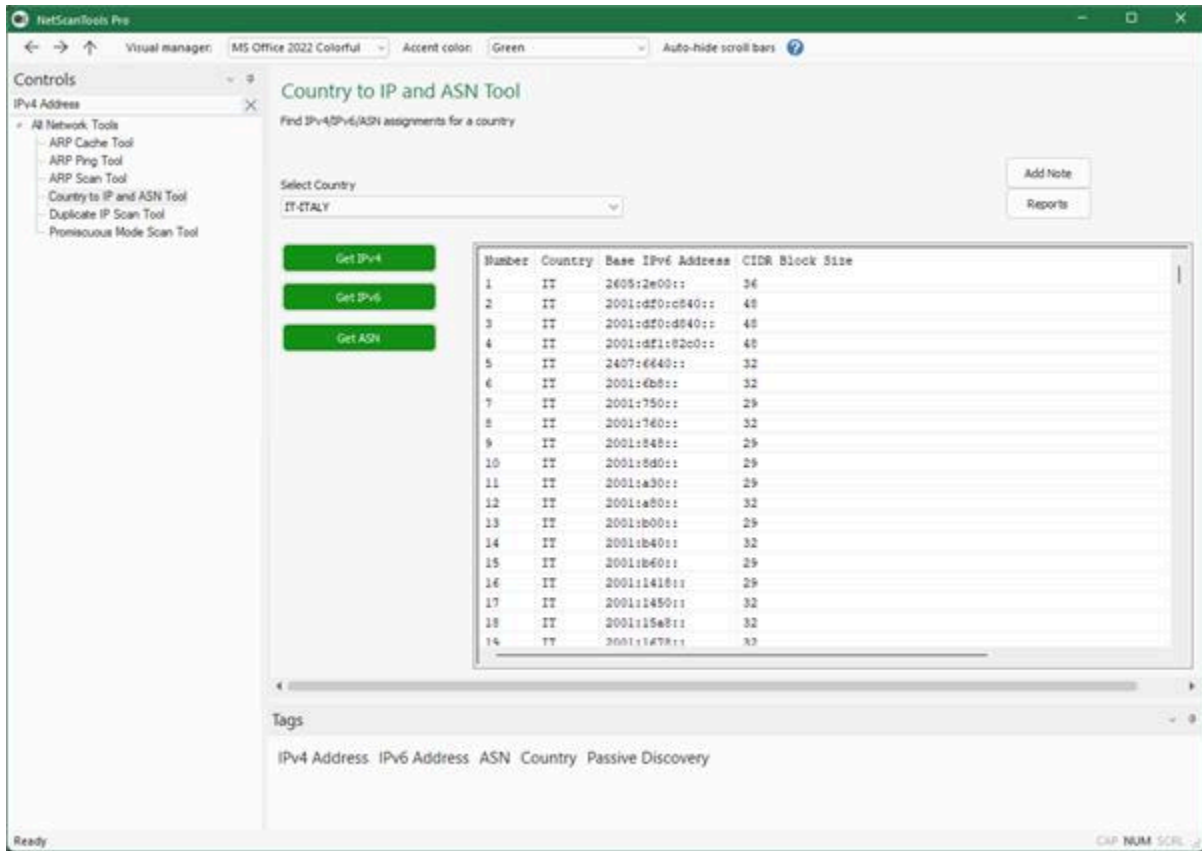

What's New

NST Pro v12 introduces a new, searchable tool navigation bar organized by name and tags, along with enhanced functionality across many tools—delivering a more streamlined user experience and improved workflows.

DNS Core

Country to IP

Thoughts on what we should add? Let us know!

Some of our best innovations came from customer requests. If you have an idea about how to improve the suite, let us know! - robby@meetnetscantools.com

Thank you all for reading and for your loyal support, it's our pleasure to serve you!
