NetScanTools Pro 11.92 Released May 21, 2021

NetScanTools Pro release 11.92 'installed version' is done and ready for download if you have a current maintenance plan. The USB patch will be ready during the first week of June.

There are significant changes to the SPF records checking tool in DNS Tools - Advanced. It has now been renamed SPF/DKIM/DMARC after the type of records it retrieves. Here is an example using sendgrid.com:

```
[Start Query]
SPF/DKIM/DMARC
Starting Timestamp: 05/28/21 09:39:02
Source DNS: 9.9.9.9
Target: sendgrid.com
```

sendgrid.com domain TXT record.

TXT Record: facebook-domain-verification=dfvlzm6tx7ues6olt99mpc58vh49qj
TXT Record: v=spf1 include:sendgrid.com._nspf.vali.email
include:%{i}._ip.%{h}._ehlo.%{d}._spf.vali.email include:stspg-customer.com
~all
TXT Record: google-site-verification=-
BR0U2prX8YJz74uUQygVn22zPdt86Jc5FVd5ZX6xXo
TXT Record: facebook-domain-verification=jotjcwly7se4q6c3xsysztxo287s9
TXT Record: loaderio=dc99536e3eb902ffc82885541e224e7c
TXT Record: MS=ms77173225
TXT Record: status-page-domain-verification=989qbtpx3q0r

DMARC _dmarc.sendgrid.com TXT record
DMARC Record: v=DMARC1; p=reject; sp=reject; pct=100; adkim=r; aspf=r;

Automatic Certificate Management Environment _acme-challenge.sendgrid.com TXT
record
DNS Reply Code (TXT): No Such DNS Record.
-No ACME TXT records were found.

[End Query]

As you can see there are several new DNS records it retrieves. The most common
DKIM records are retrieved.

In the Duplicate Ip Detection Tool we tried to make it clearer that unless there is a 'local' route to the IP addresses on the same subnet, you cannot find duplicates outside your subnet. This is because we are using ARP packets.

We added Export to XML (spreadsheet schema) for most parts of the software that use grid-based results. The new option is found in the right click menu adjacent to the save to disk options already found in the menu. The XML files can be directly opened in Microsoft Excel.

These are the changes in this new version:

- Added right click menu 'Export Results to XML' option to most grid based results. This allows opening the XML file directly by Microsoft® Excel.
- Connection Monitor - added Export Results to XML.
- DHCP Server Discovery - added 'No Response' message.
- DNS Tools / Advanced - extensive rewrite of the SPF/DKIM/DMARC Tool. Added complete dump of a domain's TXT records and new special selectors including several types of common DKIM records. Added DMARC and ACME selectors. Better explained how to use custom selectors found in email headers.
- Duplicate IP Scanner - improved validation and automatic selection of Network Interface based on starting and ending IPv4 address. Added new button to return to display of duplicate IPs. Fixed problem where if you tried to exit while the scanner was running, it would not warn you and prevent the exit.
- Packet Capture - added Export Results to XML.
- Passive Discovery - added Export Results to XML.
- Port Scanner - fixed a problem where you could not add a target to the target list under all circumstances.
- SSL Certificate Scanner - new warning about trying to scan ports other than the standard 443 for secure web servers. This tool can only retrieve certificates from web servers.
- SMB Scanner - improved response parsing for SMB1 responses reducing the chances of a false positive.
- Saving to disk no longer forces you to the Documents directory.
- Modified text to include Npcap in addition to WinPcap where applicable.
- Updated SQLite to version 3.35.5
- Updated MAC address/Manufacturer database.
- Updated IP to Country database.
- Updated dates to 2021

SSL Certificate Scanner Standalone 2.72 released April 16, 2021

This release emphasizes the expected use of the software. This tool can only be used to retrieve SSL Certificates from web servers – nothing else. We added a check for port numbers in the editor. If you use a non-standard port number, you will be warned that you should only be using it with web servers. It cannot retrieve certificates from other types of servers like mail servers.

Software dates and SQLite were updated.

These changes will be rolled into the same software that is a part of NetScanTools Pro.

How to Get NetScanTools Pro Updates

NetScanTools Pro: click on the help menu, then on Check for New Version. In the main right side area (or your web browser will launch) you will see an embedded web page with either a discussion of the current version and download links or a web page saying your maintenance plan has expired. If you have not registered, you will see a web page explaining that you need to register. You must register and have an active maintenance plan to download NetScanTools Pro updates.
